Project Profiles

Basak & Lee & Minhao

- Text heavy

- Hard to find what you are looking for

- Lack of easy search through the data
  Project folders are too static and not search-able enough

- Little communication with other projects and teams
  Lack of “Matchmaker" – Horizontal connections between projects to connect processes and individuals

- Most updates are received via emails
  Can’t send company-wide announcements without email

- Unorganized data / No categorization
  Projects are organized by numbers only

Problem Definition

- Search system through projects / Searching by content
- Communicating with other project teams and sharing the project progresses
- More visual interface for projects
- Different log in options to be able to see specific contents of projects / Privacy issues / Different department logins
- Archive options / Archieve pool to send projects
- More customized and individual interface / Widgets
- News and Current Events on “Welcome Page”

Google / Search options + Left bar for results

iPhone

From Wikipedia, the free encyclopedia
(Redirected from Iphone)

This article is about the mobile phone sold by Apple Inc. For other uses, see IPhone (disambiguation).

The **iPhone** is a line of Internet- and multimedia-enabled smartphones designed and marketed by Apple Inc. It functions as a camera phone (also including text messaging and visual voicemail), a portable media player (equivalent to a video iPod), and an Internet client (with e-mail, web browsing, and Wi-Fi connectivity)—using the phone's multi-touch screen to provide a virtual keyboard in lieu of a physical keyboard.

The first-generation phone was quad-band GSM with EDGE; the second generation phone added UMTS with 3.6 Mbps HSDPA;[16] the third generation adds support for 7.2 Mbps HSDPA downloading but remains limited to 384 Kbps uploading as Apple has not implemented the HSPA protocol.[17]

Apple announced the iPhone on January 9, 2007,[18] after months of rumors and speculation.[19] The (retroactively labelled) original iPhone was introduced in the United States on June 29, 2007 before being marketed in Europe. *Time* magazine named it the Invention of the Year in 2007.[20] Released July 11, 2008, the **iPhone 3G** supports faster 3G data speeds and assisted GPS.[16] Apple released version 3.0 of the iPhone OS for the iPhone (and iPod Touch) on June 17, 2009.[21] The **iPhone 3GS** has improved performance, a camera with higher resolution and video capability, and voice control.[22] It was released in the U.S., Canada and six European countries on June 19, 2009,[3] in Australia and Japan on June 26,[23] and saw international release in July and August 2009.
